

# Guida alla Configurazione dell'access point mode su TPLINK EX510

## 1. Configurazione

Procedere andando nella sezione "Operation Mode" e impostare la modalità Access Point, successivamente cliccare "Salva" e attendere il riavvio dell'apparato, è possibile ritornare alla Router mode seguendo nuovamente questa procedura.

The screenshot shows the TP-Link EX510 web interface. The left sidebar contains a search bar and a list of menu items: Status, Operation Mode (highlighted in yellow), Network, Wireless, Guest Network, NAT Forwarding, USB Sharing, and Parental Controls. The main content area has tabs for Quick Setup, Basic, and Advanced (selected). Below the tabs, the 'Operation Mode' section is displayed. It features two radio buttons: 'Router (Current mode)' and 'Access Point'. The 'Access Point' option is selected and highlighted in yellow. Below each option is a diagram illustrating the network setup: the Router mode shows a direct connection to the Internet, while the Access Point mode shows a connection to an existing network via a wired router. A 'Save' button is located at the bottom right of the configuration area.
